## Summary

Motorsport Performance Engineering student at ESTACA with a solid software and data background, skilled in designing robust database structures, automated pipelines, and visualisation tools.

## Education

**ESTACA – MSc Motorsport Engineering Performance, Laval, France** **2026 – 2027**

- **Vehicle dynamics:** suspension, tyres, handling and vehicle setup
- **Race engineering:** race strategy, performance analysis and trackside decision-making
- **Telemetry & data analysis:** acquisition, processing and interpretation of on-track data
- **Trackside operations:** race weekend organisation and team workflow

**ENSEIRB-MATMECA – Engineering Degree in Computer Science, Bordeaux, France** **2023 – 2026**

- Specialisation in software engineering and data analysis
- Exchange semester at **Keio University**, Tokyo, Japan (Apr – Aug 2025): machine intelligence and computer vision

## Professional Experience

**BeTomorrow – 6-month Internship** **2026**

*Bordeaux, France*

- Developed an AI-powered product matching system for E.Leclerc.
- Built a serverless cloud infrastructure on GCP (Docker, Cloud Run Jobs) giving the client full autonomy.
- Designed and deployed interactive Data Studio dashboards for client reporting.

**INRIA – 3-month Internship** **2025**

*French National Institute for Research in Digital Science and Technology, Bordeaux, France*

- Built predictive models to optimise application performance by forecasting I/O operations.
- Improved prediction accuracy and overall application efficiency.

**LORIA – 6-week Internship** **June 2023**

*Lorraine Research Laboratory in Computer Science, Nancy, France*

- Designed and developed an Android app generating spherical images from smartphone photos (image processing and mobile UI design).

## Motorsport & Data Projects

**Data-Driven Case Study: McLaren Intra-Team Comparison (2025 Hungarian GP)**

- Compared Norris vs Piastri (sector times, driving styles, tyre degradation), including stint modelling and strategic visualisations in the style of an engineering debrief.

**2024 F1 Season Analysis Report**

- Wrote a full LaTeX report on the 2024 Formula 1 season (circuit analysis, race strategies, performance trends) with consistent data presentation.
- GitHub: github.com/Laoraa/F1_Data_Analysis

## Academic Projects

**Audio-to-Score Converter (Python)** – team of 5, 2 months: developed an AI system converting audio recordings into MIDI files and musical scores.

**Autonomous Cars (Python)** – team of 4, 4 months, project manager: wrote a program enabling cars to map their environment.

## Skills & Languages

**Data & Analytics:** Python (pandas, NumPy, scikit-learn, matplotlib, seaborn), SQL, predictive modelling, machine learning (regression, classification, clustering), data visualisation

**Programming:** Python, C, C++, Java, TypeScript, HTML/CSS, SQL, MATLAB

**Tools:** Git/GitHub, Docker, Terraform, GCP (Cloud Run, GCS), Data Studio / Power BI

**Soft Skills:** Project management, teamwork, organisation, leadership, communication

**Languages:** French (native), English (C1, TOEIC 950/990), German (A2), Japanese (beginner)

## Interests

**Fencing:** national-level competitor and regional referee. **Esports:** Manager and Data Analyst of a leading European *Pokémon UNITE* team. **Creative:** crochet, drawing, light design.
